

The NEMESIS project has created and tested an educational model called Social Innovation Education to bring social innovation philosophy to primary and secondary students by combining innovative pedagogies, open technologies and participatory relations and processes. After two pilot phases the NEMESIS community has thousands of students and teachers, social innovators and specific Co-Creation Labs where educational resources are being developed.

Are you a teacher, a student, a parent, a social innovator, a community member or a local authority representative? Are you interested in getting to know the journey of schools in Greece, Spain, Portugal, UK, Netherlands and France with Social Innovation Education? Would you like to know first hand experiences of schools that manage to address their communities and pursue sustainability challenges?

Film Festival - Let's celebrate!

24 June - 9:30 to 16:30 h

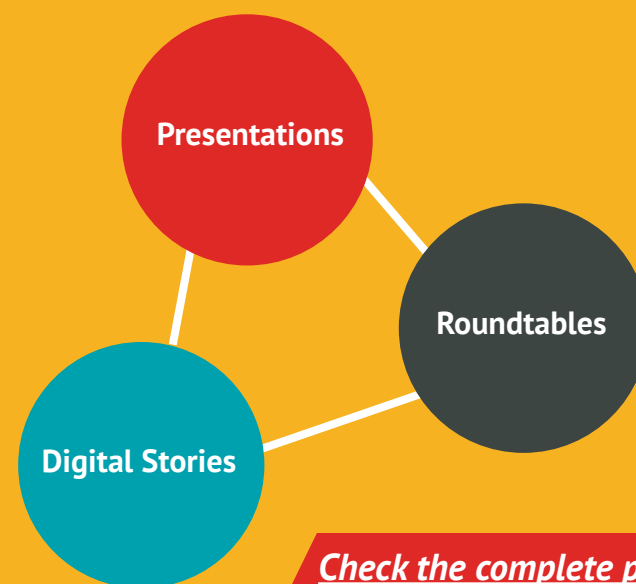

Save the link to the digital Film Festival!

The Film Festival celebrates the work and experiences of students, teachers, parents and other communities through a series of digital stories, presentations and roundtable presentations. Films produced by students throughout the Co-Creation Labs will be streamed together with presentations, so as to show stories and first hand experiences about the joy of horizontal collaboration in educational spaces.

Programme

We will have an exciting programme run by NEMESIS school representatives who will present their work, show films produced and converse on broader themes and topics related to the project. There will also be researchers, SIPs, educators and EC representatives dedicated to the social innovation and educational field.

You can check out the whole programme on the link below and join the presentations you would like to attend.
